 CODEBOOK VARIABLE DOCUMENTATION
 1995 PILOT STUDY
 (1995.PN)

NES 1995 PILOT CODEBOOK
 VARIABLE ENTRIES

This file should be opened in fixed font, 10 pitch or smaller.
 Codebook introductory material and appendix material are in
 separate files.

NOTE ON VARIABLE NAMING:

The variable name references used in NES Study codebooks do not include
 the "V" prefix found in all variable names used within the released
 SAS and SPSS data definition files (.sas and .sps files).

For example, "VAR 920001" and "VAR VERSION" in Study codebooks refer to
 V920001 and VVERSION in the study data definition files.

VARIABLE 'NUMBERING':

'Numbered' variables in NES timeseries datasets and in Pilot datasets
 (except the 1998 Pilot) comply with the following format:

2-digit year prefix + 4 digits + [opt] 1-char suffix.

Examples: 1978 Post variable V780002; 1983 Pilot variable V832101.
 Note that for datasets including data from multiple studies, the 2-digit
 year prefix corresponds to the appropriate study year to which the
 variable is associated; for example, the 1983 Pilot dataset also includes
 1982 timeseries variables, for which the 2-digit prefix is 82.

Non-time-series studies other than Pilots use 2-character mnemonic
 prefixes, for example variable VPS0048 in the 1988-1990-1992 Pooled
 Senate Study dataset.

SPECIAL NOTE ON COLUMN LOCATIONS:

Some numeric variables use coding schemes that allow for code values
 having a varying number of digits. In such instances, the number of
 columns corresponding to the variable in the data file [.dat file]
 and in the column specifications will be the width of the maximum value
 occurring in the actual data, rather than the maximum width allowable
 by the coding scheme. For example, if codes 01-12 are allowed for a
 numeric variable but all values in the data are less than 10, then the
 number of columns corresponding to the variable within the ASCII data
 file will be 1.

FULL SAMPLE WEIGHT

This weight compensates for the unequal probabilities of selection for respondents in different size households and for different non-response across geographic sample design categories and between panel and cross-section respondents. It is post-stratified to the July 1993 Census population projections for 24 age, by sex by Census region categories (Current Population Reports, P25-1111, Table 4). This is a 6 digit variable with a coded decimal point and 4 actual decimal places. The weight is centered with a mean of 1.0.

This weight is particularly appropriate for descriptive statistics. See also the "Construction of Analysis Weights" in the Sample Design section of the Appendix to the codebook for the 1994 Post-election Survey.

PANEL ONLY WEIGHT

This weight is to be used for analyses which use only the 759 panel cases; the cross-section cases have a value of "0" in this field. The weight compensates for the unequal probabilities of selection for respondents in different size households, and for differential nonresponse across geographic sample design categories. It is post-stratified to the July 1993 Census population projections for 24 age, by sex by Census region categories (Current Population Reports, P25-1111, Table 4).

This weight is centered with a mean of 1.0. This is a 6 digit variable with a coded decimal point and 4 actual decimal places.

TIME SERIES WEIGHT

This weight should be used in analyses in which the 1994 Panel is compared to earlier unweighted National Election Studies data collections. Variable 6 corrects for panel attrition and for the aging of the panel respondents. Details on the construction of this variable are provided in the Sample Design section of the Appendix to the codebook for the 1994 Post-election Survey.

This weight is centered with a mean of 1.0. This is a 6 digit variable with a coded decimal point and 4 actual decimal places. Cross-section cases have a value of 1.0000 in this variable.

The original form assignment is recorded here. The only function of this variable is to assign cases to the ballot card experiment.

In 1994 respondents were presented alternative versions of the ballot card identical in content, but different in design. Please see Appendix for sample ballots of each design.

Users wishing to employ Form in their analysis should use V611 as a filter to eliminate either cases administered over the phone or cases where it is unclear which form was used.

PRIMARY AREA NAME

This is an alphabetic variable. For the Panel component of the sample, variable 9 refers to the primary area of the segment from which respondent's household was selected in 1992; respondent may have moved since then. For Cross-Section component, it reflects the primary area of the segment from which the 1994 respondent was selected and was living when interviewed in 1994.

SEGMENT

For Panel component, variable 10 refers to the location of the area segment from which the respondent's household was selected in 1992; respondent may have moved since then. For Cross-Section component, it reflects the location of the area segment from which the 1994 respondent was selected and was living when interviewed in 1994.

This variable has been recoded to missing data for the Public Use Data File. Contact NES if access to this information is desired.

PANEL SUMMARY 1994: WAS R'S 1992 Congressional District
 REDISTRICTED IN 1994?

 Note: in MN05 limited redistricting took place, but the portion of MN05 containing NES Panel cases was not affected in 1994 (coded 2). Code 1 includes cases from Sabine parish LA (Primary Area 474, segments 1,4,7,8,11)

PANEL SUMMARY 1992: WAS 1992 CD ASSIGNMENT IN ERROR?

Code 1 includes the following PAs and segments: 501-103,
501-148,503-129, 505-105, 511-111, 516-108 (part), 528-106,
557-104, 515-105, 481-008.

Code 3 - in 1992, it was thought that this case had been
assigned the wrong CD number; the CD number was changed and
the substantive data for this case were made NA in 1992.
However, it was discovered in 1994 that the 1992
'correction' itself was a misassignment (the original 1992
CD assignment was correct); in the 1994 data the 1994 CD is
correct but no further change to the 1992 data (1992 CD
number or 1992 substantive data) has been made. Note that
for this case the 93 Pilot was administered according to the
original (correct) 92 CD assignment.

45 1. Yes, 1992 CD error, discovered in 1994; CD number
and substantive responses in 1992 data have not been
corrected
6 2. Yes, 1992 CD error, discovered in 1992; CD number
corrected and substantive responses were made NA in

SUMMARY 1993: WAS THE RESPONDENT'S 1993 PILOT CONGRESSIONAL
DISTRICT ASSIGNMENT IN ERROR?

V25, together with V7007 (Did the R Move) accounts for differences in Congressional District assignment between 1992 and 1993. The information from these variables is incorporated in summary variables V30 and V32.

- 11 1. Yes, ERROR because R moved out of 1992 CD, (9 in V7007), but 93 Pilot not conducted according to new CD
- 36 2. Yes, ERROR due to 1992 CD misassignment (1,3 in V24) continued in 1993 Pilot
- 1 3. Yes, ERROR, both 1 and 2 apply: 1992 CD misassigned, 1992 CD used in 1993 after R had moved and changed CDs (1 case)
- 582 5. NO, Pilot CD CORRECT (includes 1 case 1 in V24 where R moved and was assigned correct new CD in 93 and includes 1 case 3 in v24, 1992 misassigned CD corrected in 1993)

SUMMARY 1994: WAS R REGISTERED TO VOTE IN CONGRESSIONAL DISTRICT OF 1994 INTERVIEW LOCATION?

Interview location is the location where R was residing at the time of the 1994 interview. This variable was built by

comparing the county where R says they are registered with current CD assignment. In a very few cases, due to split county CDs, the information was ambiguous but almost always it was possible to determine whether the county was in the same or a different CD.

- 1343 1. Yes, R registered in CD where interviewed in 1994
 37 2. No, R not registered in CD of interview location
 23 9. Not clear whether registration in same or different CD (DK/NA where R registered: 8,9 in v603, 99999 in v604, or CD is 99 and state is not different from state of interview in V20)
- 393 0. Inap, R not registered (5 in 602); DK/NA whether R registered or R says not required to register (6,8,9 in 602); refused to say whether voted (6 in 601)

SUMMARY 1994: WERE CANDIDATE NAMES ADMINISTERED IN 1994 THE SAME AS THE CANDIDATES RUNNING IN THE DISTRICT WHERE R WAS REGISTERED/VOTED IN 1994?

This variable compares the congressional candidates which the R was asked to evaluate throughout the 1994 questionnaire, with those who actually were on the ballot in the congressional district where R voted (or would have voted). V28 incorporates the information from V26 and V27, that is, was R read the correct set of candidate names, and was the R registered to vote in the congressional district in which h/she was actually interviewed.

- 1331 0. Yes, administered names same as vote choice names
 12 1. No, not same, due to error in candidate name administration (1,2 in V26)
 37 2. No, not same, R registered in district other than the district of candidates whose names were administered (2 in V27)

PANEL SUMMARY 1992,1994: DID R EVALUATE THE SAME INCUMBENT CANDIDATE IN 1992 AND 1994?

This variable incorporates information from V17, V22-V24 and V26.

The 1994 administered candidate names were, in all cases except those of error (1,2 in V26), the names of the candidates who ran in the CD of R's residence at the time of the 1994 interview.

- 504 1. Yes, 1994 incumbent was also evaluated in 1992
 - 117 2. No, because type of race for 1994 IW location did not include an incumbent (55,65,75 in V17)
 - 53 3. No, because CD of 1994 interview location was different from CD of 1992 interview: R either moved to a different CD after 1992 (1 in V22) or R has 2 residences and lived at different residence in 1994 (3 in V22)
 - 23 4. No, because R was redistricted after 1992: R's 1994 incumbent was not a candidate in R's 1992 CD (1 in V23, Sabine Parish LA; no cases in this category also fit into codes 2,3 or 5)

SELECTION TABLE

The Selection Table is used to select a respondent from all household members who are eligible adults. (An eligible adult is a U.S. citizen who is 18 years of age or older by Election Day.) The Selection Table appears on the Coversheet below the Household Listing.

After a complete listing of the HH is taken, each eligible adult is assigned a "Number" based on the criteria of gender and age [beginning with the oldest male as number 1, males are numbered by increments of 1 according to descending age; females are numbered by descending age starting with the number one higher than that assigned to the youngest male]. The interviewer then uses the Selection Table to determine the "Number" of the eligible adult to be interviewed.

The Selection Table itself consists of 2 parallel columns. In the first column the interviewer circles the total number of eligible adults in the household; in the second column (same row) is identified the "Number" of the person who will be the respondent.

There are 8 different Selection Tables used and they are

randomly assigned. [Note that although only 8 tables are used, there are 12 codes in this variable because the 8 tables are used in cycles of 12; this procedure is used to

equalize the probability of selection for each eligible adult]. A summary describing all 8 Selection Tables appears below.

BELT CODE - 1990 - NES

For Panel respondents who moved since the 1992 Pre-election study, the data corresponding to their original sampling address was coded here.

Coded according to the 1990 Census and 1990 Office of Management and Budget (OMB) definitions, 1990 census population reports and 1980 (since 1990 not available) maps showing "urban areas".

- 222 1. Central Cities (*) of the six largest (**) (population over 4,500,000) Consolidated Metropolitan Statistical Areas (CMSAs), plus 12 (***) of the 15 next largest CMSA/MSA (population over 2,000,000). This would include all 1980 National Sample Frame self-representing areas, plus Newark, NJ (as well as Self Representing (SRP) Nassau-Suffolk NY as part of the NYC CMSA) and Anaheim and Riverside CA (as part of the LA CMSA) plus three other non-self representing primary areas included within the "population over 2,000,000" definition (Miami-Fort Lauderdale, FL CMSA, Seattle-Tacoma, WA CMSA, and Phoenix, AZ MSA).
- 286 2. Central Cities of CMSAs and Metropolitan Statistical Areas (MSAs) with fewer than 2,000,000 population (exclusive of those in the twenty-one largest CMSA/MSAs--i.e., those listed above)
- 388 3. Suburbs (****) of the six largest CMSAs and 12 of the 15 next largest CMSA/MSAs.
- 338 4. Suburbs of all other CMSA/MSAs.
- 494 5. Adjacent Areas: includes all territory beyond the outer boundary of the suburban belt, but within fifty miles of the central business district of a central city.
- 66 6. Outlying Area: includes all territory more than fifty miles

(*) Central Cities designated in Metropolitan Statistical Areas, 1990, U.S. Office of Management and Budget, Washington, DC (Jun 1990).

(**) Statistical Abstract of the United States 1991, (111th Edition), U.S. Department of Commerce, Economics and Statistics Administration, Bureau of the Census, Table No. 38. "70 Largest Metropolitan Areas -- Racial and Hispanic Origin Populations: 1990" Pp 33.

(***) Cleveland-Akron-Lorain, OH CMSA, Tampa-St Petersburg-Clearwater, FL CMSA and San Diego, CA MSA are not primary selections within the two-thirds SRC National Sample so do not occur in the 1992 NES data set.

(****) Suburbs are defined as all "urbanized areas" in the Primary Area exclusive of the areas coded "1" and "2" above, plus the remainder of any county which includes a central city or parts of a central city. (NOTE: In the New England division where MSA boundaries do not follow county lines, it is necessary to limit this category to the SMSA part of a county which included a central city.)

SIZE OF PLACE OF INTERVIEW - 1990

 For Panel respondents who moved since the 1992 Pre-election study, the data corresponding to their original sampling address was coded here.

Coded according to the 1990 Census. The major objective of the Census Bureau in delineating urbanized areas is to provide a better separation of urban and rural population in the vicinity of large cities. An urbanized area consists of a central city or cities, and surrounding closely settled territory ("urban fringe"). Size of Place codes 21 and 41 include areas that are in the "urban fringe" but are not Census Places. Again, it should be noted that Panel respondents may have moved from place of first interview.

The six largest CMSAs plus twelve of the fifteen next largest CMSA/MSAs (i.e., those coded 1 or 3 (possibly 5, rarely 6) on the Belt Code):

222 11. Central Cities (these would have been coded 1 on the Belt Code).

Suburbs of the six largest CMSAs and twelve of the fifteen next largest CMSA/MSAs (coded 3 (sometimes 5 and rarely 6) on Belt Code):

36 20. Rural (including rural places with less than 2500 population)
 97 21. 2,500-9,999 plus other urbanized areas ("urban fringe" not in Census places)
 112 22. 10,000-29,999
 35 23. 30,000-49,999
 119 24. 50,000-99,999
 18 25. 100,000-149,999
 5 26. 150,000-349,999
 27. 350,000 and over, exclusive of cities coded 11

CMSA/MSAs with less than 2,000,000 population (exclusive of those in the six largest CMSAs and 12 of 15 next largest CMSA/MSAs)

Central Cities in CMSA/MSAs with less than 2,000,000 population (coded 2 on Belt Code):

47 30. Under 50,000 (identified by OMB in 1990 as Central Cities)
 47 31. 50,000-99,999
 24 32. 100,000-149,999
 85 33. 150,000-349,999
 83 34. 350,000 and over

Suburbs in CMSA/MSAs with less than 2,000,000 population (coded 4 (or 5 and rarely 6) on Belt Code):

139 40. Rural (including rural places with less than 2,500 population)
 160 41. 2,500-9,999 plus other urbanized areas ("urban fringe" not in Census Places)
 50 42. 10,000-29,999

28 43. 30,000-49,999
 17 44. 50,000-99,999
 30 45. 100,000-149,999
 5 46. 150,000 and over

"NON-CMSA/PMSA/MSAs" Population of place, within these
 "non-MSA" areas, as reported in 1990 Census.

271 50. Rural (including places with less than 2,500
 population)
 73 51. 2,500-9,999
 82 52. 10,000-29,999
 10 53. 30,000-49,999

In a few cases, Non-MSA PSUs (based on the 1980 OMB SMSA definitions) contain areas which are now part of a 1990 PMSA or MSA (based on the June 1990 OMB definition). In these cases, the Size of Place Code for any SSUs (segments) within such areas are coded in the "40s" rather than in the "50s" as shown below. This occurred in El Dorado county, CA (the major part of the El Dorado/Alpine Co, CA PSU #82) which is now a part of the Sacramento, CA, MSA, and also for one SSU (segment) in the Gardner, MA (PSU #64) which is now a part of the Worcester, MA, MSA.

1980 CENSUS SMSA CODE

For Panel respondents who moved since the 1992 Pre-election study, the data corresponding to their original sampling address was coded here.

These SMSA codes were obtained from the Federal Information Processing Standard Publication, U.S. Department of Commerce, National Bureau of Standards.

The 1980 SMSA Codes have for the most part been carried over

by the Office of Management and Budget (OMB) to the 1990 Metropolitan Statistical Areas (MSA's). However, some MSA names and definitions have been modified by OMB to reflect shifts in population and changes in characteristics of areas. In the 1994 NES data, the 1980 SMSA codes have been retained for all parts of the MSA primary sampling units (PSU's). It should be remembered that, particularly in the case of PMSAs (which are part of consolidated areas (or CMSAs) some counties or county parts may in 1990 be defined by OMB as part of a different PMSA (a good example is Chicago, IL). It was felt that for NES analysis, to retain the older SMSA codes, which correspond to the 1980 sampling frame used for this sample, was most appropriate for all MSA or PMSA areas.

In those areas designated "Non-SMSA" in our sample frame ("Non-MSA" on most of our documentation for 1992 NES), there are two PSUs (#464, Gardner, MA, and #482, El Dorado/Alpine, CA) in which some of the 1980 rural area has in 1990 met the requirements for inclusion in an MSA; in these cases the size of place code was modified to reflect this and the 1990 MSA number is indicated for the affected segments (segment 009 in Gardner, MA, used in both the 1994 cross-section and the 1994 panel, where Barre town--not associated with any SMSA in 1980--is now a part of the 1990 Worcester, MA, MSA, and all of the 1994 NES segments in El Dorado/Alpine, CA,-- i.e., cross-section segments 002, 004, 005, 007, 009 and 012

and panel segment 007 -- all in El Dorado county which is part of the 1990 Sacramento, CA, MSA.)

Q.B11. (RB, P. 2) I'd like to get your feelings toward some of our political leaders and other people who have been in the news.

I'll read the name of a person and I'd like you to rate that person using something called the feeling thermometer. You can choose any number between 0 and 100. The higher the number, the warmer or more favorable you feel toward that person; the lower the number, the colder or less favorable. You would rate the person at the 50 degree mark if you feel neither warm nor cold toward them. If we come to a person whose name you don't recognize, you don't need to rate that person. Just tell me and we'll move on to the next one. Our first person is Bill Clinton. Using the thermometer, how would you rate Bill Clinton?

PROBE FOR "I DON'T KNOW" RESPONSE: When you say "don't know" do you mean that you don't know who the person is, or

do you have something else in mind?

 Recently there has been a lot of talk about women's rights. Some people feel that women should have an equal role with men in running business, industry, and government. Suppose these people are at one end of a scale, at point 1. Others feel that a woman's place is in the home. Suppose these people are at the other end, at point 7. And, of course, some other people have opinions somewhere in between at points 2, 3, 4, 5, or 6.

 -----

In a few cases, the number of children under 6 living with R exceeds the number of children R "has" who are under 6 years old (Q.Y53a). The discrepancy appears to stem from R having his/her "own" children in mind in Q.Y53a, but including step children, foster children and grand children being raised in

R's household in their answer to Q.Y53b.
