 CODEBOOK VARIABLE DOCUMENTATION
 1988 SUPERTUESDAY STUDY
 (1988.S)

NES 'SUPERTUESDAY' CODEBOOK
 VARIABLE ENTRIES

This file should be opened in fixed font, 10 pitch or smaller.
 Codebook introductory material and appendix material are in
 separate files.

NOTE ON VARIABLE NAMING:

The variable name references used in NES Study codebooks do not include
 the "V" prefix found in all variable names used within the released
 SAS and SPSS data definition files (.sas and .sps files).

For example, "VAR 920001" and "VAR VERSION" in Study codebooks refer to
 V920001 and VVERSION in the study data definition files.

VARIABLE 'NUMBERING':

'Numbered' variables in NES timeseries datasets and in Pilot datasets
 (except the 1998 Pilot) comply with the following format:

2-digit year prefix + 4 digits + [opt] 1-char suffix.

Examples: 1978 Post variable V780002; 1983 Pilot variable V832101.
 Note that for datasets including data from multiple studies, the 2-digit
 year prefix corresponds to the appropriate study year to which the
 variable is associated; for example, the 1983 Pilot dataset also includes
 1982 timeseries variables, for which the 2-digit prefix is 82.

Non-time-series studies other than Pilots use 2-character mnemonic
 prefixes, for example variable VPS0048 in the 1988-1990-1992 Pooled
 Senate Study dataset.

SPECIAL NOTE ON COLUMN LOCATIONS:

Some numeric variables use coding schemes that allow for code values
 having a varying number of digits. In such instances, the number of
 columns corresponding to the variable in the data file [.dat file]
 and in the column specifications will be the width of the maximum value
 occurring in the actual data, rather than the maximum width allowable
 by the coding scheme. For example, if codes 01-12 are allowed for a
 numeric variable but all values in the data are less than 10, then the
 number of columns corresponding to the variable within the ASCII data
 file will be 1.

VAR ST0004 Form of Questionnaire

For question c1-c3, e1-e4, g1-g14, and j2 four different questionnaire forms were used. Names of candidates and political figures were rearranged, so the sequence of names was different in each of the four forms. As candidates dropped out of the race, they were dropped from questions e1-e4, g1-g14, and j2, although the c1-c3 series continued to be asked.

VAR ST0152 SUMMARY: Knowledge of candidates-- Variables 152 to 167

summarize the R's level of knowledge of a candidate from "NEVER HEARD OF" this person to "KNOW QUITE A LOT." (See Variable 152) The summary variables are built from answers to C1 and C2, and they are used as a filter for all subsequent questions about a specific candidate. If the R NEVER HEARD OF, KNOWS ALMOST NOTHING or HAS HEARD OF BUT NA HOW MUCH, or DK or NA whether he/ she has heard OF (0, 1 and 9 in the summary), then no subsequent questions that refer to that candidate are asked. Babbitt, Haig, and DuPont dropped out of the race during the interview period (Feb.12, Haig; Feb.18, Babbitt and DuPont). As soon as the candidates' announced their withdrawal, questions E1, E2, E3, E4, and sections G and J2 ceased to be asked about them. See variables 168, 169, and 170 for Inaps. in Babbitt, Haig, and DuPont variables.

VAR ST0171 C3.Now let's talk about your feelings toward the people you know something about. I'll read the name of a person and I will ask you to rate that person on a thermometer that runs from 0 to 100 degrees. Ratings between 50 and 100 degrees mean that you feel favorable and warm toward that person. Ratings between 0 and 50 degrees mean that you don't feel too favorable and are cool toward that person. You may use any number from 0 to 100 to tell me how favorable or unfavorable your feelings are for each person. If you don't feel particularly warm or cold toward the person, you would rate the person at the 50 degree mark.

The first person is XXXXXXXXXXXX. How would you rate (him/her) using this thermometer?

VAR ST0425 J1. We hear a lot of talk these days about liberals and conservatives. Think about a ruler for measuring the political views that people might hold, from liberal to conservative. On this ruler, which goes from one to seven, a measurement of one means very liberal political views, and a measurement of seven would be very conservative. Just like a regular ruler, it has points in between, at 2, 3, 4, 5 or 6. Where would you place yourself on this scale, remembering that 1 is very liberal and 7 is very conservative, or haven't you thought much about this?

VAR ST1301

B3.Now let's talk about your feelings toward the people you know something about. II 11 read the name of a person and I will ask you to rate that person on a thermometer that runs from 0 to 100 degrees. Ratings between 50 and 100 degrees mean that you feel favorable and warm toward that person. Ratings between 0 and 50 degrees mean that you don't feel too favorable and are cool toward that person. You may use any number from 0 to 100 to tell me how favorable or unfavorable your feelings are for each person.

If you don't feel particularly warm or cool toward that person, you would rate the person at the 50 degree mark.

The first person is (FIRST NAME NOT CROSSED OUT) . How would you rate him using this thermometer?

G2. INTERVIEWER CHECKPOINT

Respondents who had never heard of a candidate from Question B1, or who had heard of a candidate but knew almost nothing about him, were not asked further questions about that candidate. This was accomplished by means of "crossing-out" names on a list of candidates which was printed on a card. The names were crossed out at B1 & B2; the card was then used by the interviewer to fill out the checkpoints at Section G. See the questionnaire for clarification.
